

1.) I ran this to successful completion and verified that I ran it as we were instructed to:

```
# Need to be in same directory as manage.py file
> python manage.py makemigrations
> python manage.py migrate
```

2.) App's view file looks like:

```
from django.shortcuts import render, HttpResponseRedirect, redirect
from django.utils.crypto import get_random_string
#from time import gmtime, strftime
```

```
def index(request): #initial or reset request
    request.session["counter"] += 1
    print request.session["counter"]

    context = {
        "randstr": get_random_string(length=14)
    }
    return render(request, 'randword/index.html', context)
```

```
def generate(request): #with method=POST?

    return redirect ("/")
```

```
def reset(request): #with method=POST?

    #request.session['counter'] = 0
    return redirect ("/")
```

3.) Got this error:

'counter'

[illegible]

Seems to be missing maybe an import statement or something. I already tried adding "session" to the first line, next to redirect and I got: ImportError: cannot import name session
